CODE REVIEW

NOTES

SHARE YOUR ACCOMPLISHMENT!  

Meets Specifications

CONGRATULATIONS !!!!

Code Quality

All code cells can be run without error.

Great! Code can be run without any error on my end!

Appropriate data types (e.g. strings, floats) and data structures (e.g. lists, dictionaries) are chosen to carry out the required analysis tasks.

Loops and conditional statements are used to process the data correctly.

Packages are used to carry out advanced tasks.

Functions are used to reduce repetitive code.

Docstrings, comments, and variable names enable readability of the code.

Script and Questions

Raw input is solicited and handled correctly to guide the interactive question-answering experience; no errors are thrown when unexpected input is entered.

Great Work All input conditions check out! Think about adding more flair with the interactions. Play around with it and have fun!

Descriptive statistics are correctly computed and used to answer the questions posed about the data. Raw data is displayed upon request by the user.

Check! All stats computed correctly. The timing took a little bit longer than expected. Please take a look at some advanced `numpy` and `pandas` functions.
